## a sheet

| reason for failure                                                                                                                                  | fix for failure product                                                                                |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| due to poor design,high price and It did not offer as many apps as competitor devices                                                               | reduce the cost and redesign the mobile to make it able to compete with other competitor devices       |
| due to its complex user interface and lack of differentiation form facebook                                                                         | make it more user-friendly and different from the competitor app like facebook                         |
| Microsoft's portable media player was intended to compete with the iPod but failed due to poor marketing, limited features, and strong competition. | introduce some new features and make it different form other media players.advertise the product more  |
| due to its lack of apps, poor performance, and WebOS software that couldn't compete with Apple's iOS or                                             | introduce more apps*, optimize and debug the os for a better user-friendly environment and to increase |
| some drones fell during flight when the battery compartment door popped open. it only had 15 minutes of flying time.                                | make the build quality of drone more strong<br>make a better battery with more battery life            |
| due to its high price, bulky design, and unreliable handwriting recognition technology.                                                             | make the design more slim and thin. make it a little more affordable                                   |
| due to higher costs, shorter recording times, and limited movie studio support, despite having superior picture quality.                            | make more affordable and optimize for wide movie studio support , longer video recordings              |
| The fragmentation of Google's messaging strategy has limited SMS and AI features.                                                                   | concentrate more on supporting the SMS features                                                        |
